

• EXPOSURE REPORT • SAMPLE DATASET

Digital Footprint & Privacy Exposure Dashboard

A profile assembled from 15 declared apps and services. Every number below is either a direct count from that list (**FACT**) or a modeled inference about behavior, demographics or risk (**ESTIMATE**). No private databases, leaked records, or real tracking data were accessed to produce this.

 Dataset scope: **15 services** • self-reported

FACT directly counted from your list **ESTIMATE** modeled, not certain

DIGITAL FOOTPRINT SCORE

● **Significant**

Breadth and depth of your presence across the web, modeled from service count and category spread.

PRIVACY SCORE

● **Fair**

How well-contained your data currently is. Lower footprint + better controls raises this.

15

TOTAL SERVICES USED **FACT**

ECOSYSTEM CONCENTRATION (GOOGLE) **FACT**

8 / 8

TRACKING SURFACE — DATA DOMAINS **EST.**

Your 15 services grouped into 8 data domains. Color intensity = modeled exposure level per domain.

Social Media

Instagram · Snapchat · TikTok

Search

Google Search

Finance

Google Pay

Shopping

Amazon · Meesho

Entertainment

YouTube · Spotify

Photos / Cloud

Google Photos

Gaming

Roblox · PUBG Mobile

Messaging

Discord · WhatsApp · iMessage

02 Company Exposure Ranking

ESTIMATE

Parent companies inferred from your app list, ranked by modeled data exposure (reach × sensitivity).

01	Google / Alphabet Search · Media · Finance · Cloud		92
02	Meta Social · Messaging		84
03	ByteDance Social Video (TikTok)		79
04	Snap Inc. Social · Camera (Snapchat)		71
05	Amazon Commerce		65
06	Krafton Gaming (PUBG Mobile)		58
07	Roblox Corporation Gaming		54

03 Data Collection Matrix

ESTIMATE

Modeled likelihood that each company's ecosystem collects a given data type, based on each product's known category and public privacy disclosures in general — not your specific account.

COMPANY	IDENTITY	LOCATION	CONTACTS	BEHAVIOR	FINANCIAL	CAMERA/BIOMETRIC	COMMS
Google	●	●	●	●	●	●	●
Meta	●	●	●	●	●	●	●
ByteDance	●	●	●	●	●	●	●
Snap Inc.	●	●	●	●	●	●	●
Amazon	●	●	●	●	●	●	●
Krafton	●	●	●	●	●	●	●
Roblox Corp.	●	●	●	●	●	●	●
Discord Inc.	●	●	●	●	●	●	●

● Likely collected

● Possible / partial

● Unlikely / minimal

04 Risk Radar

ESTIMATE

Six exposure dimensions, modeled from your service mix. A sweep does one full pass on load.

05 Digital Twin Profile

ESTIMATE

A speculative sketch of the person behind this app list. Never a claim of certainty or identity.

LIKELY AGE RANGE

Teen — Young Adult

Combination of Roblox, PUBG Mobile, Snapchat and TikTok skews toward a younger user base.

LIKELY REGION

India

Meesho and Google Pay/UPI-style payments are most common in the Indian market.

LIFESTYLE

Mobile-first, socially active

Heavy weighting toward short-video and chat apps over desktop-oriented tools.

ENTERTAINMENT HABIT

Streaming + short-form video

YouTube, Spotify and TikTok together suggest regular media consumption.

SHOPPING STYLE

Mobile commerce, value-conscious

Meesho skews toward budget/value shopping; paired with Amazon for broader selection.

DEVICE ECOSYSTEM

Android-leaning, mixed signals

iMessage suggests an iPhone is present too — ecosystem may be mixed rather than single-platform.

06 Most Valuable Data Assets

ESTIMATE

What's most commercially valuable about your footprint, ranked by typical ad-tech and data-broker demand.

- 1

Search Intent Data

Google Search reveals immediate needs and interests in real time.

Highest demand
- 2

Social Behavioral Data

Instagram, TikTok and Snapchat engagement patterns power attention and preference profiles.

High demand
- 3

Location & Movement

Snapchat and PUBG Mobile, plus Google services, can reveal regular places and routines.

High demand
- 4

Payment & Transaction History

Google Pay, Amazon and Meesho together sketch spending habits and price sensitivity.

Moderate demand
- 5

Photo & Visual Data

Google Photos may use face grouping for organization, touching biometric-adjacent data.

Moderate demand
- 6

Communication Metadata

Who you talk to and how often, even when message content stays private.

Lower demand

07 **WOW Insights**

ESTIMATE

1 in 4

of your services are owned by a single company

Google touches Search, YouTube, Pay and Photos — 27% of your footprint in one ecosystem.

8 / 8

data domains are covered

Social, messaging, entertainment, gaming, shopping, finance, search and photos are all represented — a near-complete profile surface.

3 apps

likely use front-camera or photo data

Snapchat, Instagram and Google Photos are the most camera/biometric-adjacent of your set (Estimate).

08 **Privacy Improvement Simulator**

ESTIMATE

Toggle changes on to see a modeled effect on your Privacy Score. Nothing here is applied to a real account.

Turn off ad personalization (Google & Meta)

+8

Restrict location to "while using app"

+6

Diversify away from one dominant ecosystem

+6

Review and revoke unused app permissions

+5

Limit data sharing in payment apps

+5

Enable two-factor authentication everywhere

+5

Disable face grouping in Google Photos

+4

Use disappearing / encrypted messages where available

+4

42

● Fair

Simulated Privacy Score, base 42 + selected actions

🎯 Final Verdict

Digital Footprint: Significant (● 74/100, Estimate). Fifteen services across 8 distinct data domains, concentrated mainly under **Google (27% of services, Fact)** and **Meta**, give a wide and fairly joined-up view of daily activity — search, video, messaging, payments and photos all sit with two companies.

Privacy: Fair (● 42/100, Estimate). The mix leans toward high-telemetry, ad-funded apps (social video, social camera apps, free-to-play games) rather than privacy-first tools, which is typical and not in itself a problem — but it does mean exposure is on the higher side by default.

- Highest-leverage fix: reduce ad personalization on Google and Meta accounts — touches the largest share of services at once.
- Second priority: tighten location permissions on social and gaming apps to "while using."
- Longer-term: spreading services across more independent providers would lower ecosystem concentration below 20%.

How to read this report: All facts (service count, parent companies, ecosystem concentration) are calculated directly from the 15 services you listed. Everything else — scores, heatmap intensities, the risk radar, the digital twin profile, the data collection matrix, and the value ranking — is a modeled estimate based on typical, publicly known

behavior of these categories of apps. This dashboard does not access your accounts, any data broker, or any private or leaked database, and nothing here should be treated as a certain or verified fact about you.
